

Smart Meal Service

Smart fridge

Smart fridge advantages:

1 Smart fridge recognizes food taken by the guest and automatically makes the payment

2 The auto-order system plans and optimizes the loading of shelves

3 It occupies 1 m² of space and accommodates up to 90 commodity items

4 Loyalty programs via video face recognition

5 Expiration dates tracking

6 Automatic temperature control

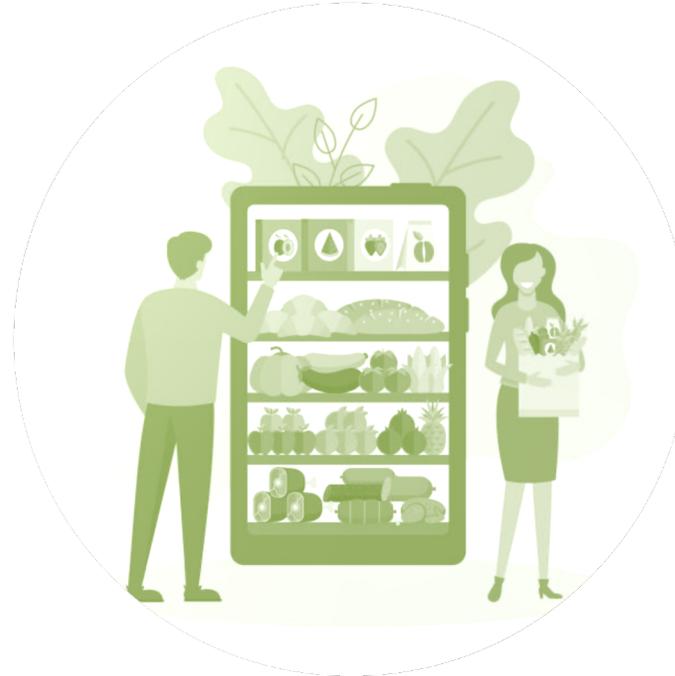

Customer journey consists of 3 steps

Step 1

Pay by any contactless form of payment

Step 2

Open the door and choose the food you like

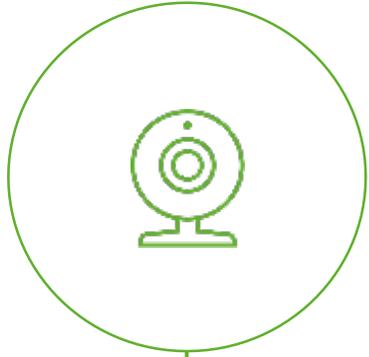

Step 3

After closing the door, the system will debit money from your credit/debit card or RFID card*

* After closing the door the refund is not applicable

The main stages of the Smart refrigerator technology

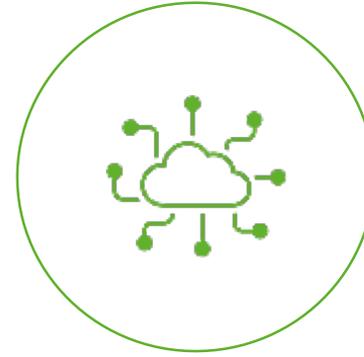

1

The neural network learns to recognize products from all angles, remembering the shape, size and color

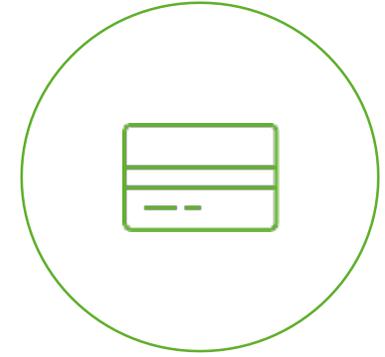

2

The trained neural network is loaded into the refrigerator

3

Now the neural network determines the product that the buyer took

4

Funds are automatically debited from the client.
